AIC Portal:- One Intelligent Platform for Students, Universities and Companies

AIC Portal is a centralized platform that connects Students, Universities, and Companies using AI-powered skill matching for internships and placements.

2. PROBLEM + PROPOSED SOLUTION

1. Problem Statement

In the existing placement and recruitment process, students, universities and companies often manage information through separate systems. Students may have difficulty finding suitable opportunities, while universities and companies have to manually process and compare large numbers of applications. This makes the recruitment process time-consuming and difficult to manage efficiently.

2. Proposed Solution

AIC Portal is a centralized platform that connects students, universities and companies. It provides structured student profiles, company requirements, opportunity management and application processing. The proposed system also introduces AI-assisted skill matching to help identify suitable candidates and provide improvement-oriented feedback.

The portal supports two recruitment workflows:

On-Campus:-

Company → University → Student → Application → AI Matching → Shortlisting

Off-Campus:-

Company → Student → Application Pool → AI Matching → Company Shortlisting

3. TECHNOLOGY STACK & SYSTEM ARCHITECTURE

3.1 Technology Stack

AIC Portal uses a combination of modern web development, database and artificial intelligence technologies to create a centralized platform for students, universities and companies.

Technology	Purpose
React.js	Development of interactive user interfaces
Tailwind CSS	Responsive and modern user interface design
JavaScript	Frontend functionality and application logic
React Router	Navigation between different portal modules
MongoDB	Storage of student, university, company and application data
Python/Flask	Development of the proposed AI/ML matching module
LLM	Data processing and preparation for AI/ML

3.2 System Architecture:- The architecture consists of four major layers:

1. Presentation Layer:

The React frontend provides separate interfaces for students, universities and companies.

2. Application Layer:

The backend handles authentication, applications, opportunities, requirements and communication between different modules.

3. Database Layer:

MongoDB stores structured information such as student profiles, company requirements, opportunities and applications.

4. AI/ML Layer:

The proposed Python-based AI module compares student skills, experience and certifications with opportunity requirements and assists in shortlisting suitable candidates.

4. STUDENT PORTAL: REGISTRATION & PROFILE

The Student Portal provides a structured environment where students can create an account, manage their academic and personal information, and prepare their profile for recruitment opportunities. The registration process collects basic account information, while detailed academic and profile information can be maintained separately.

4.1 Account Type Selection

Figure 4.1 — AIC Portal Account Type Selection

The portal provides separate access paths for **Students, Universities and Companies**. A student selects the Student option to begin the student registration process.

4.2 Student Registration

Figure 4.2 — Student Registration Page

Students create their account by providing basic information such as **full name, email, university/college and password**. The registration process is intentionally kept simple so that additional recruitment-related information can be managed through the student's profile and application forms.

4.3 Student Dashboard

Figure 4.3 — Student Dashboard

The Student Dashboard acts as the central workspace for the student. It provides quick access to profile information, available opportunities and submitted applications. The dashboard also gives the student an overview of their recruitment activity.

Profile Completion

Helps the student identify whether their profile information is complete.

Applications

Shows the number of applications submitted.

Opportunities

Shows currently available opportunities.

4.4 Student Profile

The screenshot shows the AIC Portal Student Profile Management page for a student. The left sidebar contains navigation links: Dashboard, Profile (selected), Opportunities, and Applications. The main content area features a 'My Profile' section with an 'Edit Profile' button. The profile is divided into two sections: Personal Information and Academic Information.

Personal Information	
Full Name	Email
Student Name	student@example.com
Phone	
+91 XXXXX XXXXX	

Academic Information	
University / College	Enrollment Number
ABC University	CE123456
Course	Semester
Computer Engineering	5th Semester
CGPA	
8.4	

Figure 4.4 — Student Profile Management

5. STUDENT PORTAL— EXPLORE OPPORTUNITIES & TRACK APPLICATIONS

After creating and maintaining their profile, students can explore available opportunities through the AIC Portal. They can review opportunity information, decide whether to apply, and track their submitted applications from a centralized Applications section.

5.1 Available Opportunities

Figure 5.1 — Available Opportunities

5.2 Application Process

The screenshot shows the 'Apply for Opportunity' form for the HR role at ABC Technologies. The form is structured as follows:

- Personal Information:** Fields for Full Name (Pranjal Sheth), Email (ab@gmail.com), Phone Number, and University / College (ABC University).
- Academic Information:** Fields for Enrollment Number, Course (e.g., Computer Engineering), Semester (a dropdown menu), and CGPA.
- Skills & Experience:** A text area for Skills (e.g., Python, React, JavaScript, SQL) and a text area for Experience (Describe your internships, projects or work experience).
- Certifications:** A text area for Certifications (e.g., AWS, Python, Google Cloud).
- Application Type:** Two radio button options: 'On-Campus' (Application will be reviewed through your university) and 'Off-Campus' (Application will be sent directly to the company).

 At the bottom, there are two buttons: 'Submit Application' and 'Cancel'.

AIC Portal

My Applications
Track the opportunities you have applied for.

HR Pending
ABC Technologies
Ahmedabad

Application Type	University	Course	CGPA
On-Campus	ABC University	Computer Engineering	10

Applied on 9/14/2026

Figure 5.3 — My Applications

The My Applications section provides students with a centralized view of opportunities they have applied for. The displayed information includes the **opportunity, company, location, application type, university, course, CGPA and application date**, along with the current application status.

The application status helps the student understand the current stage of their submitted application.

The form also allows students to select between **On-Campus** and **Off-Campus** application modes.

On-Campus

Application is reviewed through the student's university. The university receives the application and performs the recruitment/matching process.

Off-Campus

Application is sent directly toward the company-side recruitment workflow, where the company can process the student's application.

This directly explains why your form has:

- **On-Campus**
- **Off-Campus**

6. UNIVERSITY PORTAL

University Portal – Centralized Placement Management

AIC Portal provides universities with a centralized platform to manage registered students, receive company requirements, review applications and perform AI-assisted candidate matching.

 **University Dashboard** – Provides an overview of students, applications and company requirements.

 **Student Management** – University can access registered student information.

6.1 University Profile, Applications, Requirements

University Portal – Connecting Students with Companies

The university receives student applications and company requirements through a single platform. This allows the university to compare student profiles with company needs before shortlisting candidates.

University Profile

- Stores university account information
- Provides centralized university identity

Figure 6.3 — University Profile

Student Applications

- Displays students who applied for opportunities
- Shows application status
- Allows university to view complete application details

Figure 6.4 — Student Applications

Company Requirements

- Displays requirements submitted by companies
- Includes skills and opportunity details
- Helps university understand hiring requirements

Figure 6.4 — Company Requirements Page

6.2 University AI Matching

The AI matching module compares structured student information such as skills, experience, certifications and academic details with company requirements to assist the university in shortlisting suitable candidates

Figure 6.5 — AI Matching and Analysis

The AI does not use resume uploads; matching is performed using structured information entered by the student and company.

7. COMPANY PORTAL

7.1 Company Registration

The Company Registration page allows companies to create their account on the AIC Portal and access recruitment services

Create Company Account

Figure 7.1: Company Registration Page

7.2 Company Dashboard

The Company Dashboard provides a centralized overview of the company's recruitment activities.

Figure 7.2: Company Recruitment Dashboard

7.3 Create Opportunity

The Create Opportunity page allows companies to submit detailed requirements for a particular job position.

The 'Create Opportunity' form is a multi-sectioned interface for companies to define job requirements. It includes sections for Opportunity Details (Job Title, Company Name, Location, Application Type, and a description), Academic Requirements (Minimum GPA, Eligible Course, and Minimum Semester), Required Skills (Technical and Soft Skills), Experience Requirements (Experience Required and Minimum Experience), and Required Certifications. Each section contains input fields with placeholder text and a 'Publish Opportunity' button at the bottom right.

Figure 7.3: Company Opportunity Creation and Requirement Form

The information entered by the company forms the **requirement data for the AI matching system**.

The system can later compare these requirements with the information provided by students in their applications.

Companies provide structured job requirements that are later used by the AI system for candidate matching.

7.4 Applications

The Applications page allows companies to view student applications received for their job opportunities.

The 'Shortlisted Students' page is a dashboard for companies to view student applications. It features a sidebar with navigation links (Dashboard, Opportunities, Create Opportunity, Shortlisted Students) and a main content area. The main area includes a 'Select Opportunity' dropdown menu, a 'University Shortlisting' section with a count of shortlisted students (0), and a 'No Shortlisted Students' message with a graduation cap icon.

Figure 7.4: Student Applications and Shortlisting Page

8. DATABASE STRUCTURE & WORKING

RECRUITMENT CONTROL

ON-CAMPUS → University → AI → Shortlist
OFF-CAMPUS → Company → AI → Shortlist

Working of AIC Portal

- **Registration:** Students, universities and companies create their accounts and profiles.
- **Opportunity Creation:** Companies post job/internship requirements with skills, CGPA, experience and certifications.
- **Application:** Students view opportunities and submit their application details.
- **AI Matching:** Student skills and qualifications are compared with company requirements.
- **Shortlisting:** For On-Campus, the **University** manages AI-assisted matching and shortlisting; for Off-Campus, the **Company** manages it.
- **Result & Feedback:** Selected students proceed further, while rejected students receive feedback about missing skills, experience or certifications

Example of Database + AI Working

Criteria	Student Profile	Company Requirement	AI Matching Result
Skills	Python, SQL, Java	Python, SQL, JavaScript	✓ Python, ✓ SQL Matched ✗ JavaScript Missing
Experience	6 Months	1 Year	✗ 6 Months additional experience required
Certification	Python Certification	Cloud Certification	✗ Cloud Certification required/preferred

9. AI-BASED MATCHING & DECISION SUPPORT

“This is currently a prototype model, and additional features will be integrated in future to make the platform fully dynamic.”
